

CompSci Course

{C0DENATION}

JavaScript Fundamentals

Dot Notation

Learning Objectives

- » To understand dot notation
- » To understand different data types
- »

Dot notation

JavaScript is one of the most **popular**
languages in the **world**.

Top programming languages by repositories created, 2008–2018

Rank of top programming languages over time

JS

It is the language of the
Full Stack Developer.

JS

It uses **data**...

...what is **data**?...

Data types...

JS

In JavaScript, we have a few simple (**primitive** is the technical posh word) kinds of **data**.

Data types...

JS

String : for representing **text**

Number : for representing **numbers** (decimal and integers)

Boolean : for **true** and **false**

More data types...

JS

Null : for nothing

Undefined : for when a data type isn't determined

Symbol : This data type is used as the key for an object property when the property is intended to be private, for the internal use of a class or an object type

JS

Data has **properties...**

Dot notation

Get off on my

JS

data

•property

Let's look at a string

JS

Strings have associated data or additional information available

How many letters in
"Hello"?

Dot notation

JS

```
console.log("Hello".length)
```

We use **dot notation** to access the **property** of an **object**...

JS

```
"hello.length";  
string.length;  
object.property;
```

Try this...

JS

```
console.log("Hello, what is your name?".length)
```

What happens...

JS

So, it uses **data**...

JS

...and **methods**...

JS

Methods and data, are intimately linked.

JS

Methods

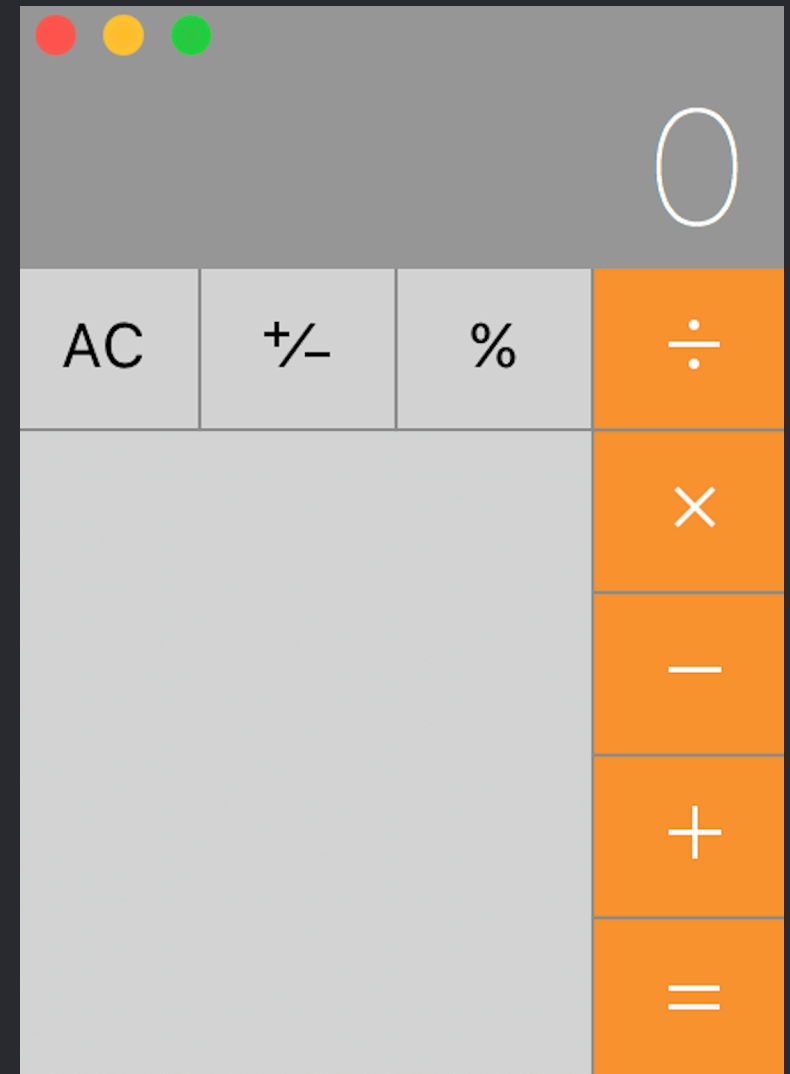

data

**Everyone loves a
calculator**

No data!!!!!!

No methods!!!!

Strings have **methods** that we can use to **manipulate** them.

JS

toString()

toFixed()

number

toPrecision()

As do **numbers**.

Try this...

```
console.log("Hello".toUpperCase)
```

What happens?...

JS

Methods need **parameters()**...

Now try this...

```
console.log("Hello".toUpperCase())
```

Dot notation

JS

```
hello.upper()  
string.upper()  
object.property()
```

JS
